

Mona

American imported Metal RF Co2 fractional laser skin care system

Perspective of Machine

protective Glasses
(Professional Anti laser radiation)

foot switch
(Professional Anti electricity leakage)

How does it works?

Fractional resurfacing is a new laser treatment modality that creates numerous microscopic thermal injury zones of controlled width, depth, and density that are surrounded by a reservoir of spared epidermal and dermal tissue, allowing for rapid repair of laser-induced thermal injury.

This unique modality, if implemented with proper laser-delivery systems, enables high-energy treatments while minimizing risks.

Scanners & Cutting Surgery Heads

Scanner : Scanning size: Maximum 20*20mm
Cutting surgery head

Vaginal Heads & Digital Endoscope

1

Digital Endoscope

2

Gold plating Reflector : Reflect the Laser

3

360 round reflector

4

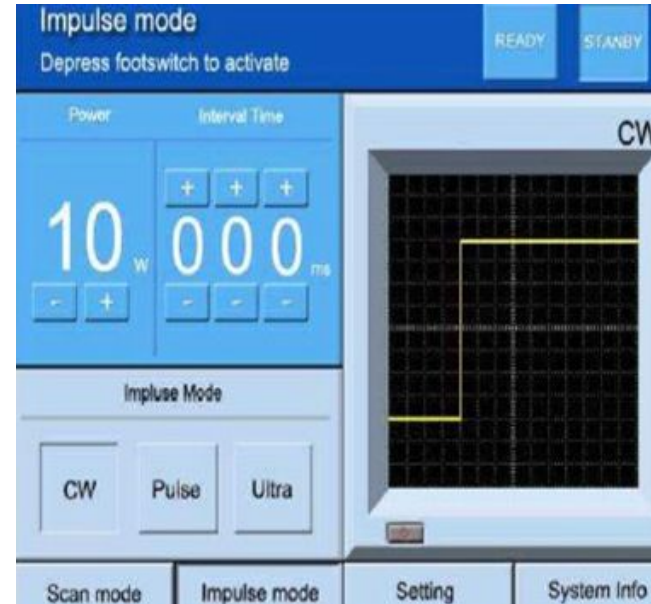

Speculum : Broaden the vagina for procedure

Easy Operation Interface

Scan Mode

Pulse Mode

Special designing green Guide light

Scan size and shape

Scan density

Scan depth

Healing zone selecting matches to each patient's needs
Leave 95% to 0% intact

Shape: Ellipse, Rectangular, Triangular, Line, Square, hexagon, round
Size: single pulse scanning maximum 20*20mm adjustable

Select target depth (Epidermal or Dermal)
Scan Depth: 20um-2000um adjustable

Treatment Benefits

Match patient needs to results

- Select healing zone volume (Density)
- Select volume treated (Spot Size)
- Select target depth (Epidermal or Dermal)

Immediate results

- Removal damaged skin
- Contracture via heat & ablation

Continued long-term improvement

- Collagen remodeling and Neocollagenesis

Easy maintenance

Professional Inside structure for easy maintenance

Specifications

Laser source: Mtal RF co2 Laser Generator

Laser Type:	10.6 μ m
Output Power:	30W
Focal length of working head:	F=50mm 75mm 100mm
Indication Beam:	Red Diode Laser(650nm, \leq 5mW)
Transmission System:	7-Articulation Joint Spring Arm
Smoke Exhausting System:	Built-in air blow
Cooling System:	Air cooling
Environmental temperature:	5°C~40°C
Relative Humidity:	\leq 80%
Power Supply:	\sim 220V \pm 22V,50Hz \pm 1Hz
Dimension:	52*68*132cm
Weight:	35kg

Working mode

Continous:	Power 1~30W step adjustable each 1 W
Pulse:	Power 1~30W step adjustable each 1
Interval time:	1~999ms
Ultra pulse:	Power 1~30W step adjustable each 1 Modulated frequency of 1000 Hz
Pulse Duration:	90-1000 μ s

Scanning mode

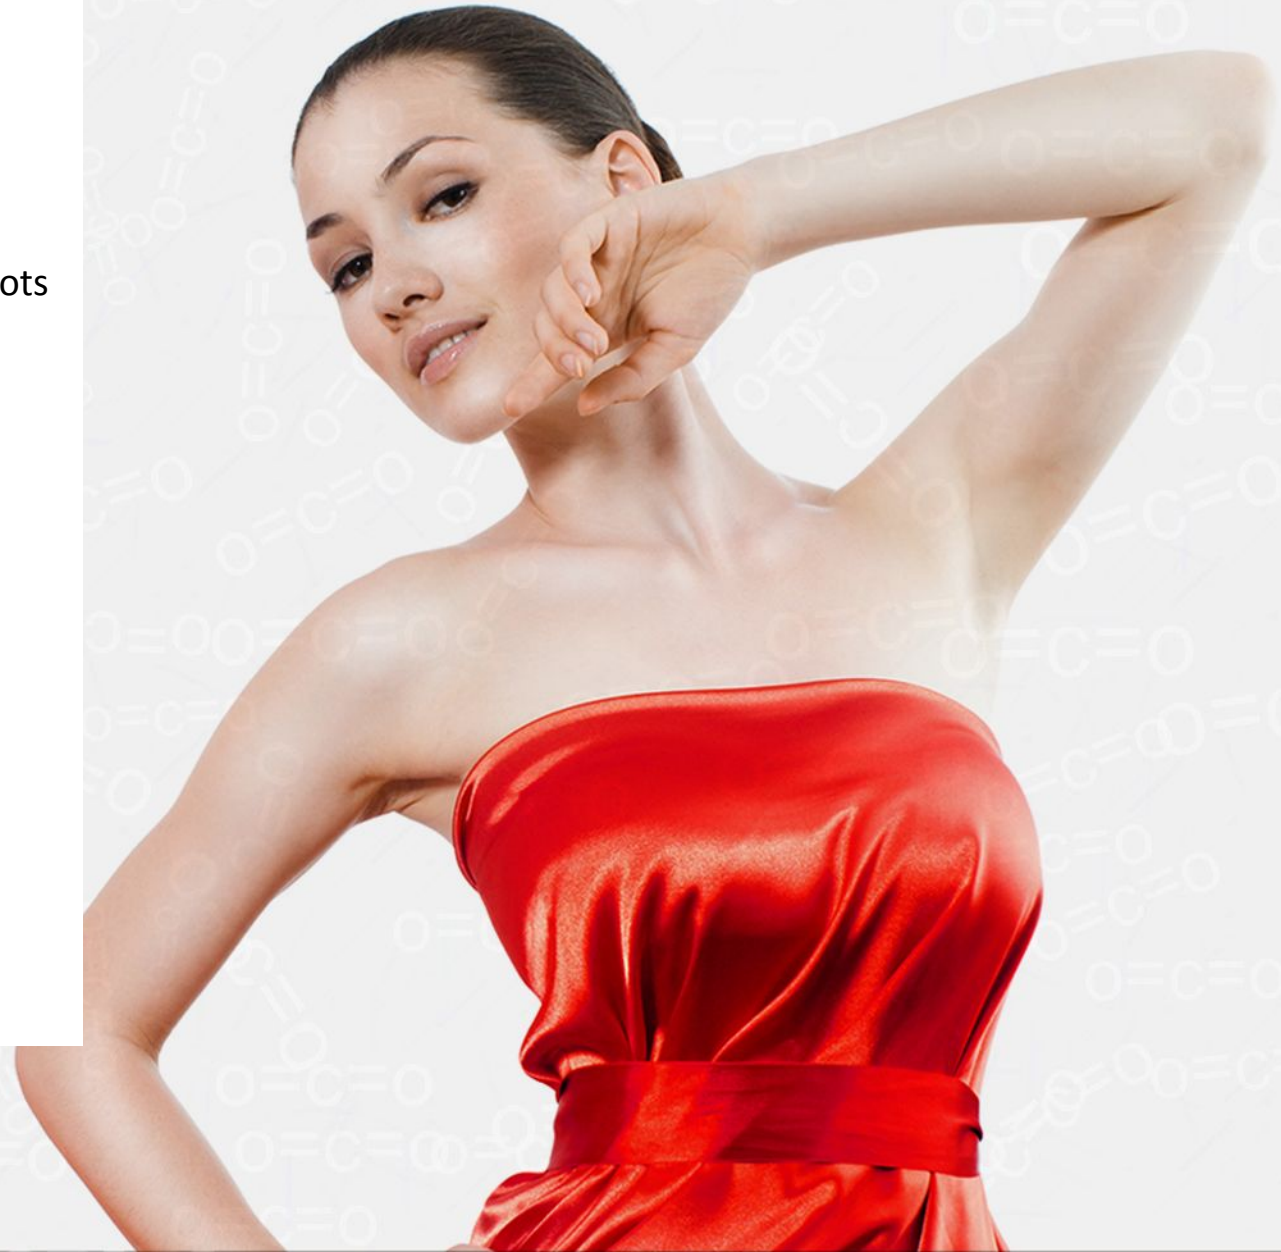

Scan mode:	Ellipse, Rectangular, Triangular, Line, Square, hexagon, round
Repeat Delay:	0.1s---- 5.0s.
Micro Pulse Energy:	5mJ---50mJ.
Treatment Level:	0.30%-----25.0%.
Passes:	1-----10 times.
Estimated Power:	24mJ--1000J.
Ellipes estimated power:	31mJ----1000J
Rectangular estimated power:	24mJ----981J
Treatment area:	0.1*0.1mm, ----- 15*15mm.(F=50mm)
Handpiece Velocity:	0.1-----9cm2/s
Scanning Depth:	≤2.0mm

Vaginal Mode

Working mode:	360 degree revolution
Treatment depth:	100mm
Treatment head diameter:	30mm
Max Scanning diameter:	9*9mm2
Spot Size Diameter:	0.2-1.0mm
Focus length:	150mm
Suggestion parameter setting:	30-40mj/pin

Indications

Skin resurfacing (to improve texture)
Pigmented lesions: Age spots / brown spots / sun spots
Wrinkles around the eyes
Acne scars
Surgical scars
Melasma (mask of pregnancy)
Actinic Keratoses
Stress Urinary Incontinence
Relaxed Vagina
Labium Whitening
Dyspareunia
Colpoxerosis
Sexual satisfaction

Notice Before Treatment

The patient should not take any medications containing aspirin (acetyl salicylic acid), high doses of vitamin E, eating garlic, consuming alcohol and smoking at least 2 weeks before and after the treatment .

The surgeon will decide whether preliminary examinations are necessary, such as blood tests, an electrocardiogram, or x-rays of the lungs. If this is the case, these tests should be performed 2 weeks before the surgery.

It is best not to wear any makeup when the client comes in for the operation.

Wear loose clothing that doesn't need to be pulled over head; the client may also want to bring a scarf to cover the bandages on the way home.

Do not eat or drink anything for 6 hours before your operation

Local anesthetic will be injected subcutaneously (under the skin)

1

Clean the skin.

2

About 20-30 minutes prior to treatment, apply a topical anesthetic to the treatment area.

3

Right before treatment beginning, wash off the anesthetic and apply a thin layer of the tracking gel.

4

During treatment, apply cold air for patient comfort.

5

After treatment, use our semi-conductor laser (physiotherapy laser) to enhance the patient's treatment experience and accelerate the benefits of treatment.

Vaginal Treatment procedure

- 1 Use the digital endoscope to detect the condition of privates.
- 2 Under the WIZ Scan Mode, insert the WIZ handpiece, Laser irradiation with 360-degree revolution ,irradiating the laser Pulling out the handpiece by checking the scales on guide tip.
- 3 Under the RF Scan Mode, put the Laser Irradiation on Target area , Rejuvenation and whitening.
